

DRAWER LOCKING KIT

The drawer locking kit can be applied to the drawer bodies made by customers.

Locking kit with key

Locking kit without key, with black or red button

SLIDING AND TILTING DRAWING SYSTEM

Our drawers can be supplied with an extraction system on galvanized steel guides with polypropylene bands.

Support, sliding and weight unload wheels

Runner for correct support, sliding, coupling and overturning

Taking advantage of its weight and its contents, the drawer slides with its runners on the PPL bands, supported by galvanized steel pins with Nylon wheels. It can be extracted and hooked securely at the end of the line, overturning on itself and leaning on the top and shelf of its internal compartment in which it is inserted.
